

# Introduction to Web Development

Topic for today: HTML

# How does Internet work?

Type

216.58.210.46

in Browser's Address Bar

# How does Websites Work?

- \* Web Browser's such as Google Chrome, Firefox, Safari etc. are all piece of softwares that allows us to lookup the IP address and be able to receive data that it can render into the websites we see.
- \* Usually, the data files are of 3 types: HTML,CSS,JS.
- \* HTML-defines Structure of website
- \* CSS-How the structure would appear to the user
- \* JS- Used to add functionality to website

# HyperText Markup Language

\* Not a programming language!

when someone says "HTML & CSS"  
Best Programming Language

# Resources to Use

- \* Mozilla Developer Network(MDN)
- \* W3School
- \* [devdocs.io](https://devdocs.io)

# First Task

---

**THE ADVENTURES OF  
SHERLOCK HOLMES**

**BY**

**SIR ARTHUR CONAN DOYLE**

---

# Personal HTML Website

\* Thomas Cormen Website
